PROFESSIONAL SUMMARY

Senior SRE/ DevOps Engineer with 10 years building secure, observable, and scalable multi-cloud infrastructure across AWS, GCP, and Azure in regulated FinTech and Telecom environments. Deep hands-on expertise in Terraform, Ansible configuration management, GitHub Actions, Datadog, and container orchestration including hybrid and on-premise deployments, site-to-site VPN architectures, and AI infrastructure. Track record of owning infrastructure programmed end-to-end: designing CI/CD pipelines, enforcing security standards, and driving 20-25% cost reduction while supporting rapid product growth.

TECHNICAL SKILLS

Multi-Cloud Infrastructure: AWS (EKS, EC2, RDS, S3, IAM, CloudFront, Route 53, CloudWatch), Azure (AKS, App Service, Entra ID, Key Vault) multi-cloud architecture, VPC peering, hybrid networking.

IaC & Configuration Management: Terraform, Ansible, Helm, multi environment provisioning, configuration management for on-premise and hybrid environments.

CI/CD & Containers: GitHub Actions (reusable workflows), Jenkins, Argo CD, Docker, Kubernetes (EKS, on-premises), Helm,

blue-green and canary deployments **Observability & Security:** Datadog (APM, logging, tracing, dashboards), Prometheus, Grafana, ELK Stack, SLO/SLI alerting, incident response, MTTR reduction. Zero Trust, RBAC, secrets management, DevSecOps, security scanning (WIZ, Trivy), compliance controls

Networking & Hybrid / On-Premise: VPC, site to site VPN, Route 53, Cloud DNS on-premise and hybrid cloud infrastructure inside constrained networks, Docker Compose container deployments, Ansible configuration management for client site VMs, hybrid cloud to on-prem connectivity.

Programming & Scripting: Python, Bash, Groovy, YAML automation scripts for operational workflows, health checks, compliance reporting, and infrastructure lifecycle management

PROFESSIONAL EXPERIENCE

SRE Engineer M4 II

adidas | Gurugram, India | Mar 2023 - Present

- Implemented and maintained CI/CD pipelines with GitHub Actions and Jenkins across 90+ microservices, security scanning (WIZ, Trivy).
- Designed and owned multi cloud AWS infrastructure using Terraform and Kubernetes EKS supporting secure production platforms across multiple environments acting as the founding infrastructure owner for platform reliability and security.
- Migrated 110+ AWS RDS PostgreSQL instances to Graviton architecture using Multi-AZ failover, reducing infrastructure costs by 20-25% while improving throughput.
- Built observability infra with Grafana across all cloud and application layers custom dashboards, APM tracing, log pipelines, and SLO driven alerting reducing incident detection time significantly.
- Implemented Kubernetes autoscaling using HPA, VPA, and KEDA, improving workload efficiency and reducing infrastructure waste.
- Automated operational workflows using Python, Bash, and Ansible, reducing manual intervention and deployment overhead across all environments.
- Enforced infrastructure security with Kubernetes RBAC and SonarQube continuously scans for bugs, code smells, and common security hotspots to ensure clean, maintainable, and bug free code.

Senior DevOps Engineer

Paytm Payments Bank | Noida, India | Oct 2018 - Mar 2023

- Led migration of on-premises Kubernetes clusters to AWS EKS for banking workloads under strict RBI compliance coordinating hybrid connectivity, pre-flight validation.
- Designed and managed hybrid on-premise to cloud architectures including site-to-site VPN connectivity, Ansible managed server configuration.
- Built and maintained Terraform and Ansible IaC for multi environment provisioning across dev, staging, and production.
- Implemented Datadog observability across 100+ services with APM, distributed tracing, log management, and custom SLO dashboards reduced incident detection time by 15% and production errors by 20%.
- Developed SLO driven alerting and incident response workflows aligned to compliance requirements, reducing MTTR and providing audit trails for regulatory reviews.
- Conducted infrastructure capacity planning and resource optimization that supported 30% traffic growth without downtime or service degradation.

- Automated repetitive operational processes using Python, Bash, and Groovy, improving deployment consistency across all regulated environments.

Site Reliability Engineer

Airtel | Noida, India | Sep 2017 - Oct 2018

- Operated Azure and GCP-based telecom production platforms using Kubernetes, Docker, Jenkins, and Datadog, maintaining high availability for critical infrastructure in a large regulated enterprise.
- Improved platform reliability by 30% through proactive monitoring, incident response optimization, and root cause analysis with documented postmortems.
- Managed hybrid on-premise and cloud infrastructure transitions, ensuring uninterrupted service continuity through structured operational handovers.

Site Reliability Engineer

IBM | Noida, India | Feb 2016 - Sep 2017

- Managed incident response, production support, and operational activities for enterprise telecom infrastructure on Linux-based distributed environments.
- Coordinated cross-functional knowledge transfer and operational transition for large-scale production system handovers.

SELECTED PROJECTS

Hybrid On-Premise to AWS EKS Migration (Paytm Payments Bank)

Technologies: AWS EKS, Terraform, Istio, site-to-site VPN, Prometheus, Datadog

- Full hybrid migration: On-premise VMs connected via site-to-site VPN to AWS EKS blue green cutover, backups, pre-flight validation, and Datadog observability throughout. Less than 20 minutes downtime across all banking workloads under RBI compliance.

Datadog Observability Platform (adidas + Paytm Payments Bank)

Technologies: Datadog, NewRelic, Instana (APM, logs, tracing, dashboards), Prometheus, Grafana, ELK Stack, AWS CloudWatch

- Unified Datadog observability across 100+ services with APM, distributed tracing, log pipelines, custom SLO dashboards, and automated incident routing reduced detection time by 15% and MTTR by 20%.

KEY ACHIEVEMENTS

- Delivered hybrid on-premise to AWS EKS banking migration with less than 20 minutes downtime under RBI compliance
- Reduced cloud infrastructure costs by 20-25% at adidas through Graviton migration and resource optimization.
- Supported 30% traffic growth at Paytm Payments Bank with zero downtime through proactive Terraform IaC capacity planning.
- Datadog SLO driven reliability programmed reduced production errors by 20%.

CERTIFICATIONS

- **claude code action** - claude (2026)

EDUCATION

Bachelor of Engineering - Computer Science

Uttarakhand Technical University | Dehradun, India | Jan 2010 - Dec 2014

LANGUAGES

English | German | Hindi

RECOGNITION & IMPACT

- Rockstar Award 2019 - Paytm Payments Bank: hybrid Kubernetes EKS migration under RBI compliance with less than 20 minutes downtime.
- Rockstar Award 2020 - Paytm Payments Bank: Datadog observability programmed reduced production errors by 20%.
